Dear Francisco,

Hope you and your family have been having a lovely spring! It must be great weather recently for you to play soccer with your team! I really appreciated your last letter to me, and it was awesome to learn about the field trips you went on to visit local high schools. When I was in middle school, I looked forward to the field trips I went on to museums in my area! There was one that I think you might have liked called the Air and Space museum. They didn't show robots, per se, (that I know you are interested in), but they had many examples of enormous planes and space-craft. It is really impressive how people designed and then engineered planes to safely carry people in the air!

^ Planes at Udvar-Hazy National Air and Space Museum ^

Here's the link to that museum to learn more: https://airandspace.si.edu/explore

They also have some cool 30 minute episodes you can watch to learn about space and aviation topics: https://airandspace.si.edu/learn/programs/stem-30

What are you most excited for this summer? Where I am, the weather is starting to change, the flowers are blooming, and now it's still light outside past 7 pm! I'm very excited to get these extra hours to spend time outside. Did you know happen to know why the days in the summer have more sunlight? It's actually because of Earth's tilted axis! You can imagine the axis as an imaginary line that connects the North and South Pole through the Earth's center. When the Earth orbits the sun, there is a time of the year where the Northern hemisphere is more exposed to the sun, due to the tilt of the axis, thus giving us the summertime! I hope you can spend these extra hours playing soccer outside with your friends!

It was great to write to you and to meet you this year. I had a wonderful time and will always remember our shared love of robots. I hope that when you get to high school you are able to explore robotics and make some friends along the way!

As you are in this transition period to the next phase of your schooling, I hope you are still able to find time for all your hobbies like drawing and playing video games. In life, balance is

very key. I know you will do great at school, and I'm sure you will learn a lot, but I especially hope you will have a lot of fun while doing it. Throughout our letters, I have been impressed by how thoughtful you are. I will not forget the first question you asked me - if I am a kind person. It told me a lot about you as a person, and I hope that you keep this very same thoughtfulness with you and apply it to all spheres of your life. I know with this quality of yours and your many other great qualities of care and curiosity you will do a lot of marvelous things for the world and have a lot of fun while doing it!

I had a great time writing to you. I hope you and your family and friends have a great summer and that you have a terrific start to high school next year!

Your friend,

Michelle
